

Electrical Request Form

Electrical service at the Annapolis Boat Show is provided by a temporary wiring system. This system taps various sources of power near the City Dock and the Annapolis Yacht Basin. Standard electrical service is as follows:

- Each in-water boat has access to one 110 volt/30 amp twist-lock receptacle.
- Each tent booth space has access to one 110 volt/5 amp outlet.
- There is no standard service for land spaces.

Due to a growing power demand and limited resources, we ask exhibitors with power requirements beyond the above to contact us in advance with specific needs. We will do everything we can to provide, if possible, the power you need. There may, however, be additional charges in certain circumstances.

If you are a land-space exhibitor whom we have provided "as needed/as can" electrical service in the past, it is especially important that you advise us of your needs. Please do not assume that we can do for you what we have done in the past without prior arrangements for this year's show.

Please complete this form and return it as soon as possible. Please keep in mind that our ability to meet your electrical needs beyond our standard service is very limited, but may be greatly enhanced with advance notice.

DATE: _____

REQUESTING SERVICE FOR DISPLAY IN:

- BAY BRIDGE BOAT SHOW
- UNITED STATES SAILBOAT SHOW
- UNITED STATES POWERBOAT SHOW

(Please fill out a separate form for each show. Make copies of this form if needed).

EXHIBITOR COMPANY NAME _____

SPACE LOCATION _____ CONTACT PERSON _____
